

Quick.
Tell the
Lidocaine

from the
Potassium
Chloride.

Cutter Labs thinks you shouldn't have to hesitate. Not for an instant.

They wanted something easy, and foolproof, for all their injectables. Complete color coding from label to cap, to help you tell which drug is which without wasting a second.

So they went with Alcoa® Steri-Twist® closures.

Of course, Cutter also likes the way they're made. All metal. With one continuous aluminum piece designed to protect the stopper, from the time it's packed till the time you open it.

So Cutter knows their medicine arrives just the way they bottled it. Safe and sterile. And easy to open, too.

The Alcoa Steri-Twist closure. When a company like Cutter Laboratories tells you they believe in it, that tells you something right there.

For details, contact your Cutter representative.
